The Centers for Disease Control and Prevention (CDC) on Thursday added the non-pharmaceutical, early-2020 COVID-19 vaccine to its routine immunization schedule for children and adolescents, formalizing the agency's vaccine advisory committee's decision made in October 2022.

Under the new guidelines, the CDC recommends healthy children 6 months to 17 years old receive a primary series of two doses of the Moderna or Pfizer-BioNTech monovalent COVID-19 vaccine, followed by a booster of the bivalent shot.

It recommends that healthy people age 12 and older receive a bivalent shot from the Moderna, Pfizer or Novavax vaccine to maintain protection.

All COVID-19 vaccines being administered in the U.S. to people under the Emergency Use Authorization (EUA) provide. The U.S. Food and Drug Administration (FDA) and CDC say the risk of myocarditis following COVID-19 vaccines is rare. Ages 12 and older. However, the agencies say the risk is greatest among males ages 12 to 39 years. Because of children who get the first dose and second dose.

In Wednesday's congressional hearing at the Biden administration's response to COVID-19, Rep. Dan Crenshaw, R-Texas, asked CDC Director Dr. Rochelle Walensky, why the CDC broke from its previous practice and added only vaccines that were approved by the FDA's Vaccines and Related Biological Products Advisory Committee to the childhood schedule and for which the vaccine poses many potential side effects without preventing transmission.

Walensky responded:

"The reason that the ACIP [Advisory Committee on Immunization Practices] has not recommended the vaccine for the routine schedule is because there was only because it was the only way it could be used to prevent Vaccination for Children' program.

"It's the only way that we could've continued children to receive the vaccine. There was access to the vaccine. ... That was the Essential Vaccine."

Data collected by the CDC through its Vaccine Adverse Event Reporting System (VAERS) and a growing number of other studies indicate serious health risks, including death, from COVID-19 vaccines.

The CDC's vaccines have not been shown to be safer, effective or safe for children," CHD argued in an amicus brief filed in Louisiana last year. "The benefits to children are minuscule, and the risks are significant. The CDC has persistently failed them damages — are known" and famous," as the FDA itself has admitted.

Other changes to the childhood schedule include adding the PCV15 shot, a pneumococcal conjugate vaccine used to help protect against pneumococcal bacteria and only recently approved for children younger than 5 years old. For and hepatitis B vaccines, and new recommendations for the measles, mumps and varicella combination shot.

The CDC now recommends an additional dose of the MMR vaccine at age 4 years where there is a mumps outbreak. It also recommends an additional poliovirus vaccine for children and adults if one polio case emerges.

This would mean the childhood vaccination schedule would increase the number of recommended injections from 16 to 18 by the time a child is 4 years old. The shots between the ages of 9 months and 18 years. The Defender reported in October.

CDC schedules primarily pharmaceutical companies from liability for vaccine injuries

Vaccine injuries are not liable for injuries or deaths associated with EUA vaccines but can be held liable for injuries caused by a fully licensed vaccine — which the vaccine is added to the CDC's childhood vaccination schedule.

Parents of children injured by vaccines listed on the childhood schedule can file claims for compensation through the National Vaccine Injury Act's Vaccine Compensation Program (VICP), a no-fault alternative to the traditional legal system for resolving vaccine injury claims.

However, the ministers voted on by the ACIP committee last year typically adds under 24 that the pneumococcal polysaccharide vaccine (PPSV23) and COVID-19 vaccines are not covered under the VICP.

Instead, the COVID-19 vaccines added to the childhood schedule will remain covered under the Public Readiness and Emergency Preparedness Act (PREP Act), which shields manufacturers from liability for injuries. Only 19 claims related to COVID-19 filed with the CICP have been found eligible for compensation, though no compensation has yet been paid.

Since it was established in 2019, the CICP only compensated 13 of the nearly 12,000 claims filed.

Are we seeing the beginning of the end of Big Pharma's reign?

The addition of the COVID-19 vaccine to the immunization schedule "helps normalize this vaccine and sends a powerful message to both healthcare providers and the general public that everyone ages 6 months and older should get the COVID-19 vaccine," Dr. Sean O'Leary, member of the ACIP committee, when weighing just as they would with any other routinely recommended vaccine." Dr. Noel Brewer said at the ACIP's October meeting.

This "normalization" comes at a time when over 80% of the U.S. population has received at least one dose of a COVID-19 vaccine, according to CDC data.

Nationally, only 13% of children were boosted as of June. Government data as of the end of the vaccine. Only 28% of children ages 12 to 17 and 32% of children ages 5 to 11 have received two doses of the vaccine, according to CDC data across states.

Holland commented on the implications of adding this shot to the schedule:

"The childhood schedule is already unscientific and unjustifiable. Adding the COVID-19 shot to the schedule is the final nail in the coffin. The only thing likely to resist, finally, putting the entire childhood vaccine industry out of business.

"The day has been long in coming, but it is now here. I believe we are now watching the beginning of the end of Big Pharma's reign over the nation's government.

At Wednesday's congressional hearing, lawmakers repeatedly raised concerns about the government's response to the pandemic and the loss of public confidence in public institutions.

Rep. Cathy McMorris Rodgers, R-Wash., said, "There's serious distrust today with our public health agencies. [Polling indicates] 48% of the people in America say our public health agencies to handle the next public health emergency."

Walensky indicated that vaccination rates for all vaccines on the childhood schedule among kindergarten children declined last year, dropping from 95% to 93%. She said the CDC is working to "rebuild trust" with the public by saying not to comply with the childhood vaccination schedule.

The most recent VAERS data on vaccine injuries, updated Feb. 3 for children 6 months to 5 years old who received a COVID-19 vaccine, showed there were 5,707 adverse events, including 284 cases raised as serious and 14 reported deaths.

For 5- to 11-year-olds, there were 18,816 reports of adverse events, including 1,244 cases raised as serious and 21 deaths.

The CDC's Vaccine Adverse Event Reporting System system for reporting vaccine injuries to the U.S. Military reports submitted to VAERS requires further investigation before a causal relationship can be confirmed. VAERS historically has been shown to report only 1% of actual vaccine adverse events.

According to Robert Lee, Ph.D., with the Massachusetts Institute of Technology, the vaccine "cause unprecedented levels of harm, including the death of young people under age 30.

As of Feb. 17 the U.K. will no longer recommend COVID-19 boosters for healthy people under age 50.

Denmark ended its universal COVID-19 vaccination campaign for healthy individuals in February 2022.

Yes, I'm vaccine hesitant, but I'm not anti-vax. It had never occurred to me to get my children vaccinated for COVID. I'm not sure why I would have. I'm not sure why anyone would. I'm not sure why anyone would have to be convinced to get the vaccine for COVID. I'm not sure why anyone would have to be convinced to get the vaccine for COVID. I'm not sure why anyone would have to be convinced to get the vaccine for COVID

I had the small pox vaccine but never developed a scab or scar and I had the polio vaccine along with tetanus a few times. These will give you an idea of when I was born. Those are the only vaccines I have had.

WHAT THE??? I JUST CAN'T UNDERSTAND HOW PEOPLE ARE NOT SEEING WHAT IS GOING ON ALL OVER OUR CORRUPT WORLD!
For this article, and thank you Dr. Baletti, WHY would anyone listen to the CDC, FDA, etc.
I read the FDA has softly said the jabs are not effective, and Gates after selling and making more money, like he needs anymore, said the jabs are ineffective and not studied enough? A LITTLE LATE! It absolutely disgusts me how many people, all ages, are dropping, or are Vax injured, and hearing some of their stories! I AN SOOO SAD FOR THIS WORLD!
I agree with Leslie Taylor, that this will increase injections from 54 to 72, but how many children will survive them?
STOP THE JABS, MASKS, MANDATES AND THANK YOU ROBERT F. KENNEDY, JR for this site!
PLEASE KEEP INFORMING US AND WE NEED TO FIGHT AND TO PRAY!

I am afraid, you did not read between the lines, when Gates said in Sydney: I am disappointed that the jab does not work as I had hoped.
The jab did NOT kill enough people, quick enough.
That is what he really meant.

I really think he meant what he said, in that it is not effective enough at what it's billed to do to continue to sell, and kills people too quickly and noticeably; his hope having been a virtually unnoticeable time bomb that does not maim and kill until years later. Alas, it is not easy to develop such a wonder drug.

What we see in front and around us is only a minuscule. The rest is unseen. However, given the extent of lying, corruption, and insanity which is obvious and which this article depicts, it beggars belief that more aren't seeing what's going on in front if their noses or eyes or are willfully turning a blind eye.

This is terrible! They want to kill many children, at the least sterilize them and destroy their immune systems. It's time for some serious pushback on these evil people whose plans to depopulate the world are taking hold in bigger ways than we ever thought possible!!

Because not enough people are involved in the resistance. You can bet that, even if they become aware, the jabbed will despise the un jabbed solely for that reason.
